RESEARCH FIELDS

My current research mainly focuses on LHC collider phenomenology beyond the Standard Model (BSM) physics:

- (multiple) Higgs bosons in the the next-to-minimal supersymmetric Standard Model
- two-Higgs-doublet model (2HDM) with scalar dark matter extension
- Higgs compositeness
- fourth generation fermion implementation in various BSM models
- exotic models with large/warped extra dimensions
- top quark physics

I am also interested in low-scale SUSY breaking model building, low-mass WIMP model building, and the studies on black holes related to the LHC physics.
